| Spacing | $s_{cr,N,fl}$ | [mm] | 4 x h_{ef} | | | |
| | s_{min} | [mm] | 80 | 150 | 150 | |
| Edge distance | $c_{cr,N,fl}$ | [mm] | 2 x h_{ef} | | | |
| | c_{min} | [mm] | Fire attack from one side: $c_{min} = 2 \times h_{ef}$ Fire attack from more than one side: $c_{min} \geq 300 \text{ mm and } \geq 2 \times h_{ef}$ | | | |

¹⁾ As a rule, splitting failure can be neglected when cracked concrete and reinforcement is assumed.

Design under fire exposure is performed according to the design method given in EOTA TR 020. Under fire exposure usually cracked concrete is assumed. The design equations are given in EOTA TR 020 § 2.2.1.

In the absence of other national regulations the partial safety factor for resistance under fire exposure $\gamma_{M,fl}$ = 1,0 is recommended

| | c_{min} | [mm] | Fire attack from one side: $c_{min} = 2 \times h_{ef}$ Fire attack from more than one side: $c_{min} \geq 300 \text{ mm}$ and $\geq 2 \times h_{ef}$ | | | |

¹⁾ As a rule, splitting failure can be neglected when cracked concrete and reinforcement is assumed.

Design under fire exposure is performed according to the design method given in EOTA TR 020. Under fire exposure usually cracked concrete is assumed. The design equations are given in EOTA TR 020 § 2.2.1.

In the absence of other national regulations the partial safety factor for resistance under fire exposure $\gamma_{M,f} = 1,0$ is recommended

| Concrete edge failure | | | | | | |
| The initial value $V^0_{Rk,c,f}$ of the characteristic resistance in concrete C20/25 to C50/60 under fire exposure may be determined by: | | | | | | |
| $V^0_{Rk,c,f} = 0,25 \times V^0_{Rk,c} \quad (\leq R90) \quad \quad V^0_{Rk,c,f} = 0,20 \times V^0_{Rk,c} \quad (R120)$ | | | | | | |
| with $V^0_{Rk,c}$ initial value of the characteristic resistance in cracked concrete C20/25 under normal temperature. | | | | | | |

Design under fire exposure is performed according to the design method given in EOTA TR 020.

Under fire exposure usually cracked concrete is assumed. The design equations are given in EOTA TR 020 § 2.2.1.

EOTA TR 020 covers design for fire exposure from one side. For fire attack from more than one side the edge distance must be increased to $c_{min} \geq 300$ mm and $\geq 2 \cdot h_{ef}$.

In the absence of other national regulations the partial safety factor for resistance under fire exposure $\gamma_{M,f} = 1,0$ is recommended.
