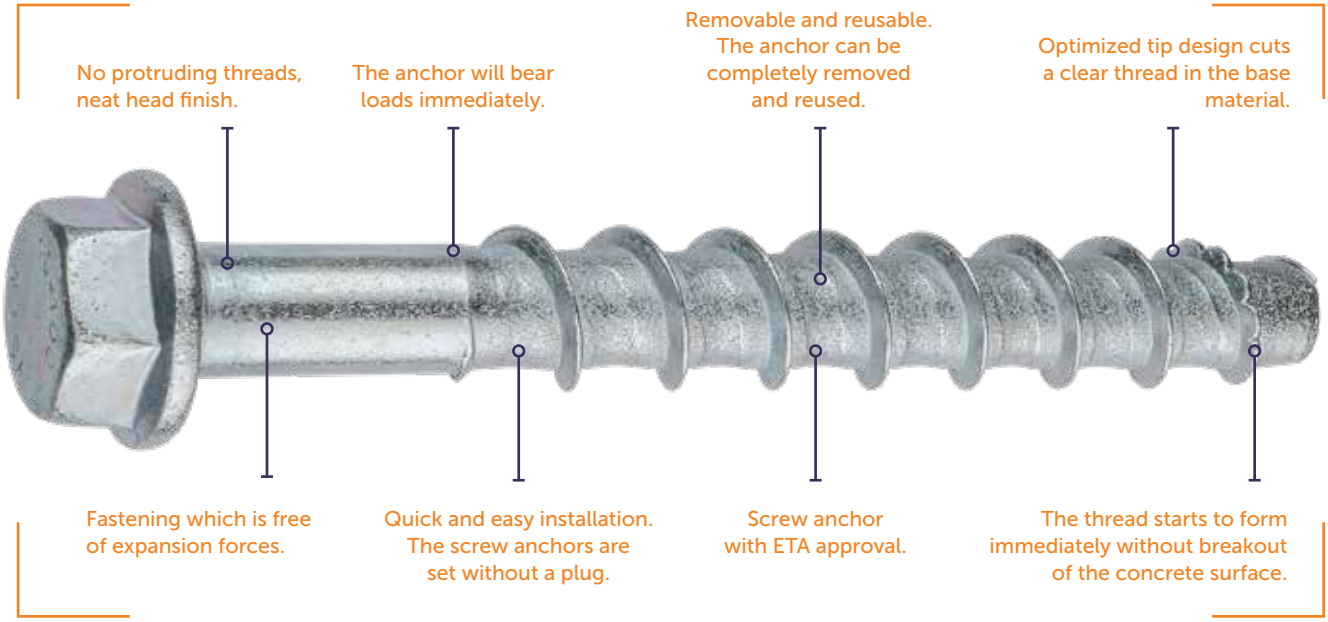
CONCRETE SCREW

PRODUCT DATA SHEET

ETA-APPROVED, HIGH PERFORMANCE CONCRETE SCREWS FROM FINLAND



CONCRETE SCREW S-CSA

The S-CSA and S-CSA+ concrete screws are very easy and quick to install. Requires neither additional tools nor operations. It is able to take high loads even with relatively small spacings and edge distances. It is removable and reusable and therefore fits also well for temporary fixings.

Description

- Self-tapping, approved screw anchors for push-through installations.
- No expansion forces allowing for relatively small edge distances and spacings.
- ZP (zinc electro plated) for dry indoor use.
- ML (Multi Layer coated) corrosion resistant coating. S-CSA ML has been neutral salt spray tested according to DIN EN ISO 9227 (prevention of red rust for more than 1000 h)
- A4 Stainless Steel with hardened carbon steel tip, coated
- Combines the benefits of undercut and chemical anchors requiring neither additional tools and operations nor hardening time.

- S-CSA(+) HEX: hexagon head with flange
- S-CSA+ HEX WOF:hexagon head without flange
- S-CSA I: combined internal thread M8/M10
- S-CSA CS: countersunk head
- S-CSA P: pan head
- S-CSA P(L): low pan head
- S-CSA HEX A4

- The concrete screw is installed directly through the fixture into the bore hole only by screwing. By doing so, the thread is cutting itself into the concrete and that way creating a mechanical interlock over the total anchorage depth.

Benefits

- Economic installation
- Quick and easy installation
- No expansion forces
- Relatively small spacings and edge distances possible
- Removable
- Can be reused

TYPES

S-CSA+ HEX

Concrete screw with hexagonal head and flange. Sizes 8, 10, 14

S-CSA+ HEX WOF

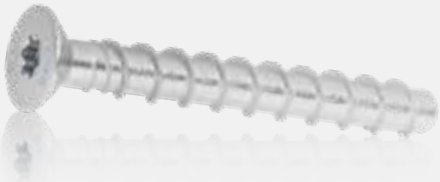
Concrete screw with hexagonal head without flange. Size 14

S-CSA HEX

Concrete screw with hexagonal head and flange. Sizes 5, 6
Size 6 has also T-drive

S-CSA CS

Concrete screw with countersunk head and T-drive. Sizes 5, 6

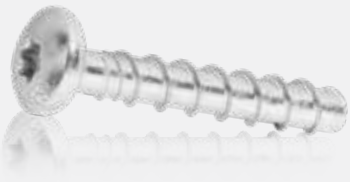


S-CSA I

Concrete screw with combined internal thread M8 / M10. Size 6

S-CSA P

Concrete screw with pan head and T-drive. Size 6



S-CSA HEX A4

Concrete screw with hexagonal head and flange. Size 6,8 and 10

BASE MATERIALS

Approved for

Cracked concrete

Non-cracked concrete

Hollow concrete slab

Also suitable for

Solid clay brick

Solid sand -lime brick

Additional information concerning all given data in the product data sheet

1. Load figures include the partial safety factors as per approvals and a partial safety factor on the action of $\gamma_F = 1.4$. Load figures apply for a rebar spacing $s \geq 15$ cm or alternatively for a rebar spacing $s \geq 10$ cm in combination with a rebar diameter of $d_s \leq 10$ mm.

2. If spacings or edge distances become smaller than the characteristic figures ($s_{cr,N}$ / $c_{cr,N}$) a calculation as per EN 1992-4 needs to be carried out. For more details, see ETA-16/0945, ETA-17/1009, ETA-20/0446 and ETA-22/0413.

3. Concrete is considered non-cracked when the value of tension within the concrete is $\sigma_L + \sigma_R \leq 0$. In the absence of detailed verification $\sigma_R = 3$ N/mm^2 can be assumed (σ_L equals the tension within the concrete as a result of external loads, forces on anchor included; σ_R equals the tension coming from shrinkage or creep of the concrete, as well as displacements of supports or temperature variations).

4. Shear load figures apply for an anchor without influence of a concrete edge. For shear loads close to an edge ($c \leq 10 \times h_{ef}$), concrete edge failure has to be checked as per EN 1992-4.

STATIC AND QUASI-STATIC LOADS S-CSA / S-CSA+

The data of these tables is based on:

- Concrete C20/25, $f_{ck,cube}$ = 25 N/mm².
- Installation has been done correctly (see p. 15).
- No influence of edge distances and spacings (see p. 16).
- Respect of minimum base material thickness (see p. 16).

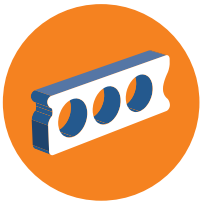
BASIC LOADING DATA FOR PRECAST PRE-STRESSED HOLLOW CORE SLABS

The data of these tables is based on:

- Concrete C30/37 to C50/60
- Installation has been done correctly (see page 17).
- Edge distances and spacings acc. page 17.
- The data of these tables is based on ETA-17/1009 (S-CSA 6).



Characteristic resistances

			S-CSA 6		
Nominal anchorage depth	h_{nom}	[mm]		35 / 40	
Flange thickness	d_b	[mm]	≥ 25	≥ 30	≥ 40
Load for all directions	F_{Rk}	[kN]	2,5	3,5	5,0
Char. bending resistance	$M^0_{Rk,s}$	[Nm]		16,0	
Edge distance	$c_{cr} = c_{min}$	[mm]		100	
Spacing	$s_{cr} = s_{min}$	[mm]		100	

Design resistances

			S-CSA 6		
Nominal anchorage depth	h_{nom}	[mm]		35 / 40	
Flange thickness	d_b	[mm]	≥ 25	≥ 30	≥ 40
Load for all directions	F_{Rd}	[kN]	1,7	2,3	3,3
Design bending resistance	$M_{Rd,s}$	[Nm]		12,8	
Edge distance	$c_{cr} = c_{min}$	[mm]		100	
Spacing	$s_{cr} = s_{min}$	[mm]		100	

Recommended loads

			S-CSA 6		
Nominal anchorage depth	h_{nom}	[mm]		35 / 40	
Flange thickness	d_b	[mm]	≥ 25	≥ 30	≥ 40
Load for all directions	F_{rec}	[kN]	1,2	1,7	2,4
Rec. bending load	M_{rec}	[Nm]		9,1	
Edge distance	$c_{cr} = c_{min}$	[mm]		100	
Spacing	$s_{cr} = s_{min}$	[mm]		100	

The partial safety factor for action is $\gamma = 1.4$.

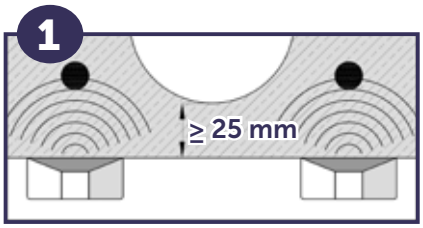
Requirements for multiple anchoring

The definition of redundant fastening according to Member States is given in the EAD 330747 § 1.2.1. In Absence of definition by Member State the following default values may be taken.

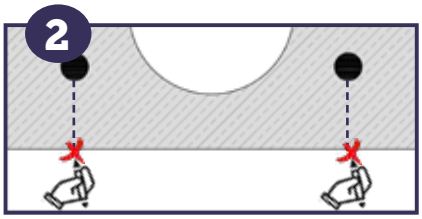
Minimum number of fixing points	Minimum number of anchors per fixing point	Maximum design load of action N_{Sd} per fixing point
3	**1**	**2 kN**
4	**1**	**3 kN**

The value N_{Sd} migth be increased if in the design it is shown that the requirements on the strength and stiffness of the fixture in the serviceability and ultimate states after the failure of one anchor are fulfilled.

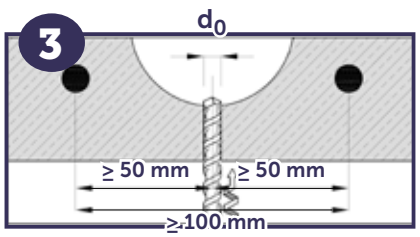
INSTALLATION INSTRUCTIONS IN PRE-STRESSED HOLLOW CORE SLABS



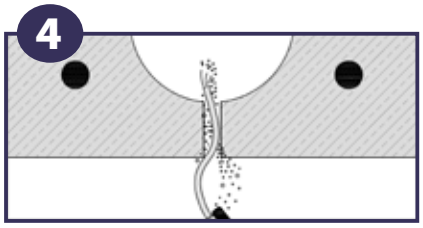
1. Locate rebars by means of suitable detector



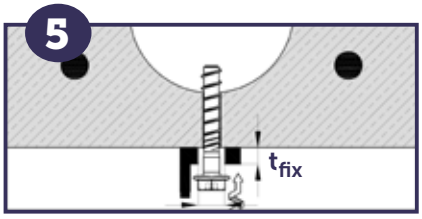
2. Mark rebar location



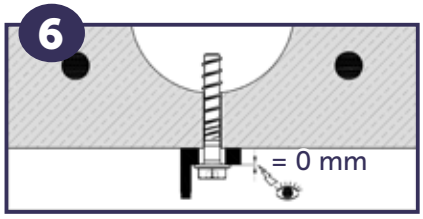
3. Make a cylindrical hole



4. Clean the hole

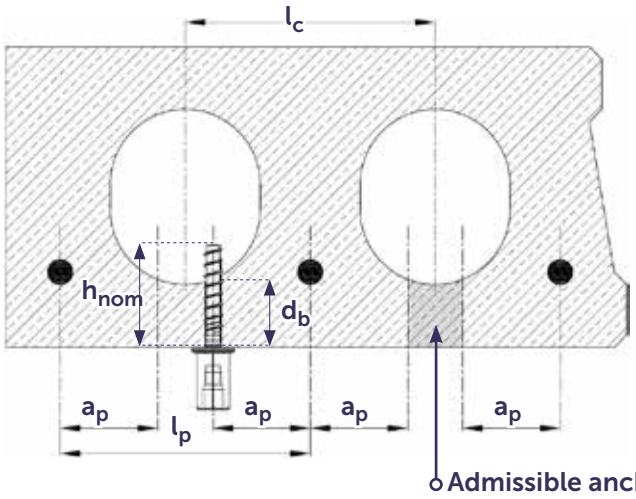


5. Install the screw anchor very gently by screwdriver or torque wrench. Avoid overtightening.



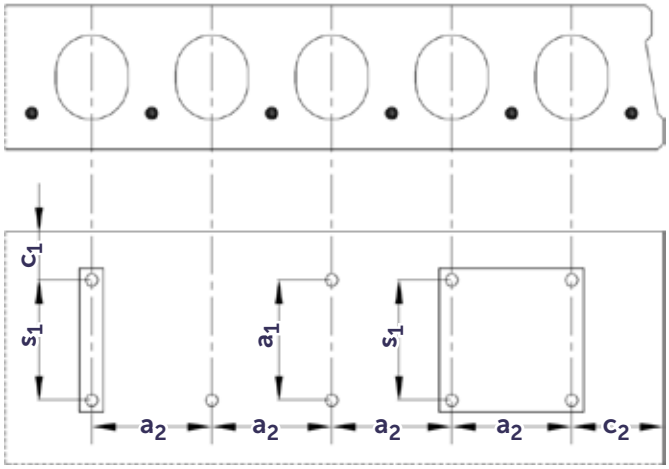
6. Ensure that the screw anchor head fully rests without any gap on the fixture and is not damaged

Admissible anchor position in pre-stressed hollow core slabs



Core distance	$l_c \geq 100$ mm
Pre-stressing steel distance	$l_p \geq 100$ mm
Distance between anchor position and prestressing steel	$a_p \geq 50$ mm

Minimum spacing and edge distance of anchors and distance between anchor groups in pre-stressed hollow core slabs



Minimum edge distance	$c_{min} \geq 100$ mm
Minimum anchor spacing	$s_{min} \geq 100$ mm
Minimum distance between anchor groups	$a_{min} \geq 100$ mm

c1, c2	edge distance
s1, s2	anchor spacing
a1, a2	distance between anchor groups

SEISMIC RESISTANCE

Design acc. EN 1992-4 Performance category C2

The data of these tables is based on:

- Concrete C20/25, $f_{ck,cube}$ = 25 N/mm^2
- Installation has been done correctly
- No influence of edge distances and spacings
- Respect of minimum base material thickness
- α_{gap} = 1,0 (used with seismic filling washer, concerns only the shear values)
- ETA-20/0446 (S-CSA+)

Characteristic resistances

Anchor size		8-2	10-2	14-2
Effective anchorage depth h_{ef}	[mm]	**51,9**	**68,0**	**91,8**
Cracked concrete				
Tension $N_{Rk,\ seis}$	[kN]	**1,9**	**3,8**	**6,9**
Shear $V_{Rk,\ seis}$	[kN]	**13,6***	**24,6***	**41,5***

Design resistances

Anchor size		8-2	10-2	14-2
Effective anchorage depth h_{ef}	[mm]	**51,9**	**68,0**	**91,8**
Cracked concrete				
Tension $N_{Rd,\ seis}$	[kN]	**1,3**	**2,5**	**4,6**
Shear $V_{Rd,\ seis}$	[kN]	**10,9***	**19,7***	**33,2***

Recommended loads

Anchor size		8-2	10-2	14-2
Effective anchorage depth h_{ef}	[mm]	**51,9**	**68,0**	**91,8**
Cracked concrete				
Tension $N_{Rec,\ seis}$	[kN]	**0,9**	**1,8**	**3,3**
Shear $V_{Rec,\ seis}$	[kN]	**7,8***	**14,1***	**23,7***

α_{seis} and α_{gap} included as per EN 1992-4. The shear values consider filling of the annular gap between the anchor and the fixture.

* Failure mode = steel

FILLING WASHER

For seismic applications
Installation with S-CSA+ concrete screw

When selecting a S-CSA+ concrete screw, please note that the use of the Filling Washer reduces the fixture thickness t_{fix} of the concrete screw

1. Mount matching Filling Washer additionally to Concrete Screw

2. Drive in Concrete Screw with Filling Washer until the anchorage depth h_{nom} is reached

3. Stick mixer reducer tip on static mixer nozzle.
Adhesive tape can be used if necessary.

4. Fill the annular gap between Concrete screw and fixture through the hole of the Filling Washer until resin leaks out of this hole.

Please observe installation instructions of injection resin. Load may only be applied after the curing time of the injection resin is reached.

Filling Washer is used for filling the gap between fixture and concrete screw after it has been set.

After installation, the Sormat ITH resin is injected using the mixer reducer tip (included) until resin seeps out.

S-CSA+ concrete screw	8	10	14
Filling washer size	26x12x5	28x14x5	34x17x5
Reduction of fixture thickness t_{fix}	t_{fix} -5 mm	t_{fix} -5 mm	t_{fix} -5 mm

FIRE RESISTANCE S-CSA/S-CSA+

Design under fire exposure is performed according to the design method given in EN 1992-4.

The data of these tables is based on: ETA-16/0945, ETA-17/1009 and ETA-20/0446

- Concrete C20/25, $f_{ck,cube}$ = 25 N/mm^2
- Values cannot be used with hollow core slabs
- Installation has been done correctly (p.15)
- No influence of edge distances and spacings (p. 16)
- Respect of minimum base material thickness (p. 16)

Characteristic resistances, S-CSA/S-CSA+

			S-CSA 6			S-CSA+ 8		S-CSA+ 10		S-CSA+ 14	
			PART 6	PART 6	OPT 1	OPT 1		OPT 1		OPT 1

	Shear $V_{Rk,\,fi}$	[kN]	0,12	0,12	0,12	0,21	0,21	0,53	0,53	1,33	1,33

The recommended loads under fire exposure include a safety factor for resistance under fire exposure $\gamma_{M,fi}$ = 1,0 and the partial safety factor for action $\gamma_{F,fi}$ = 1,0. The partial safety factors for action shall be taken from national regulations.

FIRE RESISTANCE S-CSA A4

Design under fire exposure is performed according to the design method given in EN 1992-4.

The data of these tables is based on: ETA-22/0413

- Concrete C20/25, $f_{ck,cube}$ = 25 N/mm²
- Values cannot be used with hollow core slabs
- Installation has been done correctly (p.17)
- No influence of edge distances and spacings (p. 17)
- Respect of minimum base material thickness (p. 17)

Characteristic resistances, S-CSA A4

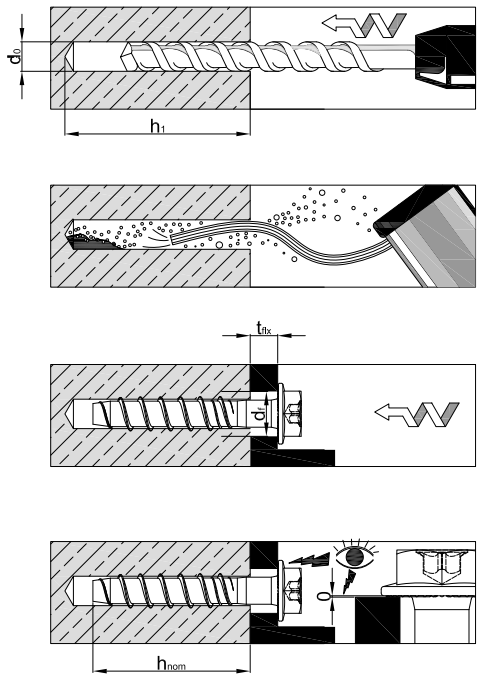
INSTALLATION INSTRUCTIONS

Installation equipment

Specification	S-CSA 5	S-CSA 6	S-CSA+ 8	S-CSA+ 10	S-CSA+ 14	S-CSA 6 A4	S-CSA 8 A4	S-CSA 10 A4
Rotary hammer	750...1200 r.p.m / 1.8 ...3.3 J							
Drill bit	SDS+ 2-CUT or 4-CUT sizes 5, 6, 8, 10, 14 mm							
Socket (SW) [mm]	8	13	13	15	21 or 24	13	13	15
T-drive / Torx	T25	T30	-	-	-	-	-	-
Additional tools	air pump/compressor, torque wrench, impact screw driver							



NOTES:

CONCRETE AND HOLLOW CORE SLAB

- Concrete strength is C20/25 to C50/60 Hollow core slabs C30/37 to C50/60
- No significant voids in concrete.
- Concrete is well compacted.
- Thickness of concrete is according PDS installation data.

INSTALLATION

Edge distances and spacing are according PDS installation data.

- Use proper air pump or compressor.
- Drill hole is deep enough (mentioned h_1 in PDS installation data).
- All dust should be cleaned from the hole to avoid screw jamming during installation.
- Pay special attention to cleaning, especially when installing downwards.
- In case of aborted hole, drilling of new hole at a minimum distance of twice the depth of the aborted hole, or smaller distance provided the aborted drill hole is filled with high strength non-shrinkage mortar. No shear or oblique tension loads are allowed in the direction of a not filled aborted hole.

OTHER BASE MATERIALS

- Concrete screw can be used also in other base materials such as solid clay brick and solid sand-lime brick.

S-CSA+ 14 REUSABILITY

DIBt Z-21.8-2136 approves the reuse of the S-CSA+ concrete screw, 14 mm diameter with hexagon head in combination with the CG checking gauge. The checking gauge is a tool for measuring the reusability of the S-CSA+ 14 concrete screw for temporary applications. The checking must be performed before each reuse.

Field of application

S-CSA+ 14 shall only be applied for temporary fastening of construction site equipment, such as shoring props, fall protection devices or scaffolds. After it has been unscrewed, the fastener may be reused in other drill holes. However, a drilled hole shall not be reused after the fastener has been removed. Reusability of the fastener shall be checked prior to every use, both visually as well as with a sleeve gauge in accordance with installation parameters. Installed fasteners shall be checked for visible damage (for example due to corrosion) on an ongoing basis and replaced if required. The fastener may be used in cracked and non-cracked concrete. The fastener is intended for temporary use in internal and external conditions.

Installation

S-CSA+ 14 is only intended for temporary application in a single drilled hole. After it has been removed, it may be reused in other drilled holes. However, it may not be screwed into the same drilled hole for a second time. Prior to every reuse, the wear of the thread shall be verified with an appropriate sleeve gauge (CG). The fastener shall only be reused under the condition that it will penetrate the sleeve only so far that it does not protrude at the rear of the sleeve (see Annex 2). Screws which are visibly damaged, e.g. due to corrosion, shall not be reused. The fastener may be screwed in using an impact screw driver. To prevent the screw from spinning, the screw driver with a power output in the upper range shall be equipped with an automatic cut-off device, e.g. via a depth stop.

The fastener is installed correctly if
- the base plate (fixture) is screwed flush against the concrete without an intermediate layer,
- the fastener head is fully in contact with the base plate,
- the fastener cannot easily be turned further,
- the embedment depth hnom is adhered to.

Anchor size			S-CSA+ 14	
Nominal embedment depth	h_{nom}	[mm]	65	115
Design resistance for concrete with a compressive strength $f_{ck,cube} \geq 10$ N/mm^2	F_{Rd} [1)]	[kN]	2,7	6,7
Design resistance for concrete with a compressive strength $f_{ck,cube} \geq 15$ N/mm^2	F_{Rd} [1)]	[kN]	3,0	8,0
Design resistance for concrete with a compressive strength $f_{ck,cube} \geq 20$ N/mm^2	F_{Rd} [1)]	[kN]	3,0	9,3
Design resistance for concrete with a compressive strength $f_{ck,cube} \geq 25$ N/mm^2	F_{Rd} [1)]	[kN]	3,3	10,0

[1)] Design resistance incl. partial safety factor.
