European Technical Assessment

ETA-16/0089
of 20 December 2024

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment:	Deutsches Institut für Bautechnik
Trade name of the construction product	Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry
Product family to which the construction product belongs	Metal Injection anchors for use in masonry
Manufacturer	EJOT SE & Co. KG Market Unit Construction In der Stockwiese 35 57334 Bad Laasphe GERMANY
Manufacturing plant	EJOT Herstellwerk 24
This European Technical Assessment contains	77 pages including 3 annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	EAD 330076-01-0604
This version replaces	ETA-16/0089 issued on 24 November 2016

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific Part

1 Technical description of the product

The "Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry" is a bonded anchor (injection type) consisting of a mortar cartridge with injection mortar EJOT Multifix USF / Sormat ITH-Ve or EJOT Multifix USF Winter / Sormat ITH-Wi, a perforated sleeve and an anchor rod with hexagon nut and washer or an Internal threaded rod. The steel elements are made of zinc coated steel, stainless steel or high corrosion resistant steel.

The anchor rod is placed into a drilled hole filled with injection mortar and is anchored via the bond between steel element, injection mortar and masonry and mechanical interlock.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance for static and quasi-static loading	See Annexes B 5, B 6 C 1 to C 56
Characteristic resistance and displacements for seismic loading	No performance assessed

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire under tension and shear loading with and without lever arm. Minimum edge distances and spacing	See Annexes C2, C7, C8, C13, C14, C17, C18, C19, C20, C37, C38, C43, C44, C45, C46, C51 and C52

3.3 Hygiene, health and the environment (BWR 3)

Essential characteristic	Performance
Content, emission and/or release of dangerous substances	No performance assessed

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330076-01-0604 the applicable European legal act is: [97/177/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 20 December 2024 by Deutsches Institut für Bautechnik

Dipl.-Ing. Beatrix Wittstock
Head of Section

Installation in solid brick with or without non-loadbearing layer

Threaded rod M8 up to M16 / Internal threaded rod IG-M6 up to IG-M10 without sleeve

Prepositioned installation

Push through installation

Threaded rod M8 up to M16 / Internal threaded rod IG-M6 up to IG-M10 with sleeve

Prepositioned installation

Push through installation

Installation in hollow brick with or without non-loadbearing layer

Threaded rod M8 up to M16 / Internal threaded rod IG-M6 up to IG-M10 with sleeve

Prepositioned installation

Push through installation

For push through installation the annular gap between rod and fixture must be filled with mortar

- h_{ef} = effective anchor depth
 h_{nom} = overall anchor embedment depth
 h_0 = drill hole depth
 h = thickness of masonry member

- d_0 = nominal drill hole diameter
 d_f = diameter clearance hole
 t_{fix} = thickness of fixture
 t_{nll} = thickness of non-loadbearing layer

Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry

Product description
Installed condition

Annex A 1

Installation in hollow brick with or without non-loadbearing layer and / or thermal isolation

Threaded rod M8 and M10 / Internal threaded rod IG-M6 with sleeve SH 16x130/330

Push through installation

Prepositioned installation

Push through installation

h_{ef} = effective anchorage depth
 h_{nom} = overall anchor embedment depth
 h_0 = drill hole depth
 h = thickness of masonry member

d_0 = nominal drill hole diameter
 d_f = diameter clearance hole
 t_{fix} = thickness of fixture
 t_{nll} = thickness of non-loadbearing layer

Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for
masonry

Product description
Injection system

Annex A 3

Threaded rod M8 up to M16 with washer and hexagon nut

Commercial standard rod with:

- Materials, dimensions and mechanical properties acc. to Table A1
- Inspection certificate 3.1 acc. to EN 10204:2004. The document shall be stored
- Marking of embedment depth

Internal threaded rod IG-M6 to IG-M10

Threaded rod or screw

- Producer marking: e.g.  M8
-  Marking Internal thread (optional)
-  Mark
- M8 Thread size (Internal thread)
- A4 additional mark for stainless steel
- HCR additional mark for high-corrosion resistance steel
- 8 additional mark for property class 8.8

Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry

Product description
Threaded rod and Internal threaded rod

Annex A 4

Table A1: Materials						
Part	Designation	Material				
Steel, zinc plated (Steel acc. to EN ISO 683-4:2018 or EN 10263:2017) - zinc plated ≥ 5 µm acc. to EN ISO 4042:2022 or - hot-dip galvanised ≥ 40 µm acc. to EN ISO 1461:2022 and EN ISO 10684:2004+AC:2009 or - sherardized ≥ 45 µm acc. to EN ISO 17668:2016						
1	Threaded rod	Property class	Characteristic steel ultimate tensile strength	Characteristic steel yield strength	Elongation at fracture	
		acc. to EN ISO 898-1:2013	4.6	f _{uk} = 400 N/mm ²	f _{yk} = 240 N/mm ²	A ₅ > 8%
			4.8	f _{uk} = 400 N/mm ²	f _{yk} = 320 N/mm ²	A ₅ > 8%
			5.6	f _{uk} = 500 N/mm ²	f _{yk} = 300 N/mm ²	A ₅ > 8%
			5.8	f _{uk} = 500 N/mm ²	f _{yk} = 400 N/mm ²	A ₅ > 8%
			8.8	f _{uk} = 800 N/mm ²	f _{yk} = 640 N/mm ²	A ₅ > 8%
2	Hexagon nut	acc. to EN ISO 898-2:2022	4	for anchor rod class 4.6 or 4.8		
			5	for anchor rod class 5.6 or 5.8		
			8	for anchor rod class 8.8		
3	Washer	Steel, zinc plated, hot-dip galvanised or sherardized (e.g.: EN ISO 887:2006, EN ISO 7089:2000, EN ISO 7093:2000 or EN ISO 7094:2000)				
4	Internal threaded anchor rod ²⁾	Property class	Characteristic steel ultimate tensile strength	Characteristic steel yield strength	Elongation at fracture	
		acc. to EN ISO 898-1:2013	5.8	f _{uk} = 500 N/mm ²	f _{yk} = 400 N/mm ²	A ₅ > 8%
			8.8	f _{uk} = 800 N/mm ²	f _{yk} = 640 N/mm ²	A ₅ > 8%
Stainless steel A2 (Material 1.4301 / 1.4307 / 1.4311 / 1.4567 or 1.4541, acc. to EN 10088-1:2014) Stainless steel A4 (Material 1.4401 / 1.4404 / 1.4571 / 1.4362 or 1.4578, acc. to EN 10088-1:2014) High corrosion resistance steel (Material 1.4529 or 1.4565, acc. to EN 10088-1: 2014)						
1	Threaded rod ¹⁾	Property class	Characteristic steel ultimate tensile strength	Characteristic steel yield strength	Elongation at fracture	
		acc. to EN ISO 3506-1:2020	50	f _{uk} = 500 N/mm ²	f _{yk} = 210 N/mm ²	A ₅ > 8%
			70	f _{uk} = 700 N/mm ²	f _{yk} = 450 N/mm ²	A ₅ > 8%
				80	f _{uk} = 800 N/mm ²	f _{yk} = 600 N/mm ²
2	Hexagon nut ¹⁾	acc. to EN ISO 3506-1:2020	50	for anchor rod class 50		
			70	for anchor rod class 70		
			80	for anchor rod class 80		
3	Washer	Stainless steel A2, A4 or HCR (e.g.: EN ISO 887:2006, EN ISO 7089:2000, EN ISO 7093:2000 or EN ISO 7094:2000)				
4	Internal threaded anchor rod ²⁾	Property class	Characteristic steel ultimate tensile strength	Characteristic steel yield strength	Elongation at fracture	
		acc. to EN ISO 3506-1:2020	50	f _{uk} = 500 N/mm ²	f _{yk} = 210 N/mm ²	A ₅ > 8%
			70	f _{uk} = 700 N/mm ²	f _{yk} = 450 N/mm ²	A ₅ > 8%
1) Property class 80 only for stainless steel A4 and HCR 2) Using internally threaded anchor rod screws and threaded rods (incl. nut and washer) must at least correspond to the material and strength class of the internally threaded anchor rod used.

Annex A 6

Specifications of intended use		
Anchorage subject to:	Static and quasi-static loads, fire exposure under tension and shear loads M8 up to M16, IG-M6 up to IG-M10 (with and without sleeve)	
Base material	Masonry group b: Solid brick masonry	Annex B 2
	Masonry group c: Hollow brick masonry	Annex B 2 to B 4
	Masonry group d: Autoclaved Aerated Concrete	Annex B 2
	Mortar strength class of the masonry M2,5 at minimum according to EN 998-2:2016. For other bricks in solid masonry and in hollow masonry or in autoclaved aerated concrete, the characteristic resistance of the anchor may be determined by job site tests according to EOTA TR 053, Edition July 2022 under consideration of the β -factor according to Annex C 1, Table C1.	
Hole drilling	See Annex C 4 – C 56	
Use category	Condition d/d: Installation and use in dry masonry Condition w/w: Installation and use in dry or wet masonry (incl. w/d installation in wet masonry and use in dry masonry)	
Temperature Range	T _a : - 40°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C) T _b : - 40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C) T _a : - 40°C to +120°C (max. short term temperature +120°C and max. long term temperature +72°C)	
Note: The characteristic resistance for solid bricks and autoclaved aerated concrete are also valid for larger brick sizes and larger compressive strenght of the masonry unit.		
Use conditions (Environmental conditions): - Structures subject to dry internal conditions (all materials). - For all other conditions according to EN 1993-1-4:2006+ A2:2020 corresponding to corrosion resistance classes to Table A1 (stainless steel and high corrosion resistant steel).		
Design: - Verifiable calculation notes and drawings are prepared taking account the relevant masonry in the region of the anchorage, the loads to be transmitted and their transmission to the supports of the structure. The position of the anchor is indicated on the design drawings. - The anchorages are designed in accordance with the EOTA TR 054, Edition July 2022, under the responsibility of an engineer experienced in anchorages and masonry work. - Applies to all bricks if no other values are specified: • $N_{Rk} = N_{Rk,b} = N_{Rk,p} = N_{Rk,b,c} = N_{Rk,p,c}$ • $V_{Rk} = V_{Rk,b} = V_{Rk,c,II} = V_{Rk,c,I}$ - For the calculation of pulling out a brick under tension loading $N_{Rk,pb}$ or pushing out a brick under shear loading $V_{Rk,pb}$ see EOTA Technical Report TR 054, Edition July 2022. - $N_{Rk,s}$, $V_{Rk,s}$ and $M^0_{Rk,s}$ see Annexes C 1 - C 2 - For application with sleeve with drill bit size ≤ 15mm installed in joints not filled with mortar: • $N_{Rk,p,j} = 0,18 * N_{Rk,p}$ and $N_{Rk,b,j} = 0,18 * N_{Rk,b}$ ($N_{Rk,p} = N_{Rk,b}$ see Annex C 4 to C 56) • $V_{Rk,c,j} = 0,15 * V_{Rk,c}$ and $V_{Rk,b,j} = 0,15 * V_{Rk,b}$ ($V_{Rk,b}$ see Annex C 4 to C 56; and $V_{Rk,c}$ see Annex C 3) - Application without sleeve installed in joints not filled with mortar is not allowed.		
Installation: - Anchor Installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.

Intended use
Working and curing time

Annex B 8

Installation instructions	
	1. Drill a hole to the required embedment depth with drilling method according to Annex C 4 - C 56. Drill bit diameter according to Table B5.
	2a. Blow the bore hole clean minimum 2x from the bottom or back by hand pump or compressed air tool (Annex B 7). For applications in solid masonry with a bore hole depth $h_0 > 100\text{mm}$ cleaning with compressed air is required.
	2b. Attach brush RBT according to Table B5 to a drilling machine or a cordless screwdriver. Brush the bore hole minimum 2x with brush over the entire embedment depth in a twisting motion (if necessary, use a brush extension RBL).
	2c. Finally blow the bore hole clean minimum 2x from the bottom or back by hand pump or compressed air tool (Annex B 7). For applications in solid masonry with a bore hole depth $h_0 > 100\text{mm}$ cleaning with compressed air is required.
	3. Screw on static-mixing nozzle SM-14W / PM-19E, and load the cartridge into an appropriate dispensing tool. If necessary, cut off the foil tube clip before use. For every working interruption longer than the maximum working time t_{work} (Annex B 8) as well as for new cartridges, a new static-mixer shall be used.
	4. Mark setting position on the anchor rod. Consider t_{nll} and/or t_{fix} in case of installation through non-loadbearing layers and/or push through installation. The anchor rod shall be free of dirt, grease, oil or other foreign material.
	5. Not proper mixed mortar is not sufficient for fastening. Dispense and discard mortar until an uniform grey colour is shown (at least 3 full strokes; for foil tube cartridges at least 6 full strokes).
Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry	
Intended use Installation instructions	
Annex B 9	

Installation instructions (continuation)

Installation without sleeve

6. Starting at bottom of the hole and fill the hole up to approximately two-thirds with adhesive. (If necessary, a mixer nozzle extension VL shall be used.) Slowly withdraw of the static mixing nozzle avoid creating air pockets Observe the temperature related working time t_{work} (Annex B 8).

7. Insert the anchor rod while turning slightly up to the embedment mark.

8. Annular gap between anchor rod and base material must be completely filled with mortar. For push through installation the annular gap between anchor rod and fixture must be filled with mortar. Otherwise, the installation must be repeated starting from step 6 before the maximum working time t_{work} has expired.

Installation with sleeve

6. Insert the perforated sleeve into the hole flush with the surface of the masonry. Never modify the sleeve in anchoring area (h_{ef}). For installation with sleeve SH 16x130/330 through a non-load-bearing layer and/or fixture the clamping area may be reduced to the thickness of the non-load-bearing layer and/or attachment.

7. Starting from the bottom or back fill the sleeve with mortar. (If necessary, a mixer nozzle extension VL shall be used.) Refer to the cartridge label or the technical data sheet for the exact amount of mortar. For push-through installation through the fixture the sleeve must also be completely filled with mortar up to the fixture. Observe the temperature related working time t_{work} (Annex B 8).

8. Insert the anchor rod with a slight twist up to the mark

Injection system EJOT Multifix Vinylester / Sormat ITH Vinylester for masonry

Intended use
Installation instructions (continuation)

Annex B 10

Installation instructions (continuation)

9. Temperature related curing time t_{cure} (Annex B 8) must be observed. Do not move or load the fastener during curing time.

10. Install the fixture by using a calibrated torque wrench. Observe maximum installation torque (Annex C 4 to C 56).

Performances Characteristic steel resistance under tension and shear load – under fire exposure										

Spacing and edge distances

- C_{cr} = Char. Edge distance
 C_{min} = Minimum Edge distance
 $S_{cr,II}$; $(S_{min,II})$ = Characteristic (minimum) spacing for anchors placed parallel to horizontal joint
 $S_{cr,\perp}$; $(S_{min,\perp})$ = Characteristic (minimum) spacing for anchors placed perpendicular to horizontal joint

Anchor position \ Load direction	Tension load		Shear load parallel to free edge V_{II}		Shear load perpendicular to free edge $V_{\perp}$	
Anchors parallel to horizontal joint $S_{cr,II}$; $(S_{min,II})$		$\alpha_{g,II,N}$		$\alpha_{g,II,V_{II}}$		$\alpha_{g,II,V_{\perp}}$
Anchors vertical to horizontal joint $S_{cr,\perp}$; $(S_{min,\perp})$		$\alpha_{g,\perp,N}$		$\alpha_{g,\perp,V_{II}}$		$\alpha_{g,\perp,V_{\perp}}$

- $\alpha_{edge,N}$ = Reduction factor for tension loads at the free edge for $c_{min} \leq c < c_{cr}$ (single anchor)
 $\alpha_{edge,V_{\perp}}$ = Reduction factor for shear loads perpendicular to the free edge for $c_{min} \leq c < c_{cr}$ (single anchor)
 $\alpha_{edge,V_{II}}$ = Reduction factor for shear loads parallel to the free edge for $c_{min} \leq c < c_{cr}$ (single anchor)
 $\alpha_{g,II,N}$ = Group factor for anchors parallel to horizontal joint under tension load
 $\alpha_{g,\perp,N}$ = Group factor for anchors perpendicular to horizontal joint under tension load
 $\alpha_{g,II,V_{II}}$ = Group factor for anchors parallel to horizontal joint under shear load parallel to the free edge
 $\alpha_{g,\perp,V_{II}}$ = Group factor for anchors perpendicular to horizontal joint under shear load parallel to the free edge
 $\alpha_{g,II,V_{\perp}}$ = Group factor for anchors parallel to horizontal joint under shear load perpendicular to the free edge
 $\alpha_{g,\perp,V_{\perp}}$ = Group factor for anchors perpendicular to hor. joint under shear load perpendicular to the free edge

- Single anchor at the edge: $N_{Rk,b,c} = \alpha_{edge,N} * N_{Rk,b}$ resp. $N_{Rk,p,c} = \alpha_{edge,N} * N_{Rk,p}$
 $V_{Rk,c,II} = \alpha_{edge,V_{II}} * V_{Rk,b}$
 $V_{Rk,c,\perp} = \alpha_{edge,V_{\perp}} * V_{Rk,b}$
 Group of 2 anchors: $N_{Rk}^g = \alpha_{g,N} * N_{Rk,b}$ resp. $V_{Rk,\perp}^g = \alpha_{g,V_{\perp}} * V_{Rk,b}$ (for $c \geq c_{cr}$)
 $V_{Rk,c,II}^g = \alpha_{g,V_{II}} * V_{Rk,b}$ resp. $V_{Rk,c,\perp}^g = \alpha_{g,V_{\perp}} * V_{Rk,b}$ (for $c \geq c_{min}$)
 Group of 4 anchors: $N_{Rk}^g = \alpha_{g,II,N} * \alpha_{g,\perp,N} * N_{Rk,b}$ resp. $V_{Rk,\perp}^g = \alpha_{g,II,V_{\perp}} * \alpha_{g,\perp,V_{\perp}} * V_{Rk,b}$ (for $c \geq c_{cr}$)
 $V_{Rk,c,II}^g = \alpha_{g,II,V_{II}} * \alpha_{g,\perp,V_{II}} * V_{Rk,b}$ resp. $V_{Rk,c,\perp}^g = \alpha_{g,II,V_{\perp}} * \alpha_{g,\perp,V_{\perp}} * V_{Rk,b}$ (for $c \geq c_{min}$)

Equations depend on anchor position and load direction (see table above). Reduction factor, group factor and resistances see annex C 4 – C 56. Reduction for installation in joints see annex B 1.
