High performance through bolts+ for fixing in cracked and non-cracked concrete

THROUGH BOLTS

The through bolt is a torque-controlled expansion anchor for use in cracked and non-cracked concrete. The anchor is preassembled and can be installed directly through the fixture.

Available in

- Zinc electroplated steel for indoor and dry applications.
- Hot dip galvanized steel for damp interiors with occasional exposure to condensation and in non-safety-relevant slightly corrosive outside environments, when corrosion is inspected regularly.
- Stainless steel for outdoor applications subject to humidity, as well as installation in industrial and maritime environments.
- HCR stainless steel for aggressive conditions, chloride atmosphere and atmosphere with chemical pollution such as tunnels, swimming pools etc.

Benefits

- Fixing in cracked and non-cracked concrete, also suitable for natural stone
- Torque-controlled expansion anchors for pre-, push-through and distance installations
- When torque is applied the expansion clip expands developing frictional grip into the hole.
- Anchor diameter and max. fixture thickness marked on the body.
- Anchor length letter code marked on the bolt head.
- Colored setting depth marking for the deeper anchorage depth on the thread.
- Variable range of coatings and materials such as ZP, HDG, A4 and HCR 1.4529 which supports for anchor selecting in different applications
- Sormat Through bolts are manufactured reliably in Finland since 1970s

High performance through bolts+ for fixing in cracked and non-cracked concrete

S-KA+ carbon steel

Zinc electroplated acc. EN ISO 4042, $t \geq 5 \mu\text{m}$

Dry indoor conditions, indoor with temporary condensation.

S-KAK+ carbon steel

Hot dip galvanized acc. EN ISO 10684, $t \geq 50 \mu\text{m}$

Humid indoor use, outdoor inland rural areas only in not safety relevant applications.

S-KAH+ A4 stainless steel

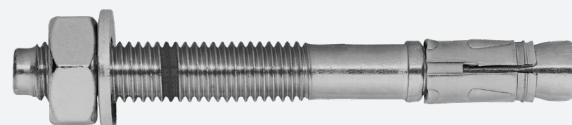

A4 for indoor, outdoor, industrial use and maritime climate

S-KAH+ A4 recommended when fire or corrosion resistance is required.

BA-E Plus HCR

HCR for extremely corrosive conditions,

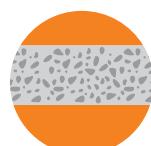

such as high chlorine concentrations (swimming halls), road tunnels and desulphurization plants.

Base materials

Approved for

Cracked
concrete

Non-cracked
concrete

Also suitable for

Natural
stone

Premium-quality M6 and M20 through bolts for fixing in cracked and non-cracked concrete

S-KA carbon steel

Zinc electroplated acc. EN ISO 4042, $t \geq 5 \mu\text{m}$

Dry indoor conditions, indoor with temporary condensation

S-KAH A4 stainless steel

A4 for indoor, outdoor, industrial use and maritime climate

S-KAH A4 recommended when fire or corrosion resistance is required.

S-KAK carbon steel

Hot dip galvanized acc. EN ISO 10684, $t \geq 40 \mu\text{m}$

Humid indoor use, outdoor inland rural areas only

S-KAR A2 stainless steel

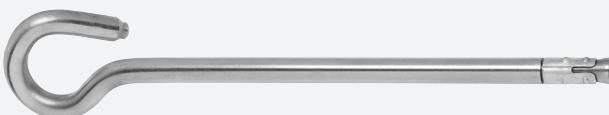

A2 for dry and humid indoor use, outdoor in rural areas only

Suitable for minings and for fixing very thick fixtures, such a thermal insulation and wood structures to concrete

HHA A2 stainless steel

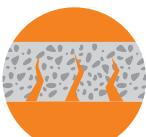

A2 for dry and humid indoor use, outdoor in rural areas only

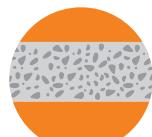

Hammer hook anchor for suspension in tunnels and mines

Base materials

Approved for

Cracked concrete

Non-cracked concrete

Also suitable for

Solid clay brick
(M8 max)

Natural stone

Through bolt Approvals / Certifications / Applications

Additional information concerning all given data in the product data sheet

- Load figures include the partial safety factors as per approvals and a partial safety factor on the action of $\gamma_F = 1.4$. Load figures apply for a rebar spacing $s \geq 15 \text{ cm}$ or alternatively for a rebar spacing $s \geq 10 \text{ cm}$ in combination with a rebar diameter of $d_s \leq 10 \text{ mm}$.
- If spacings or edge distances become smaller than the characteristic figures ($s_{cr,N} / c_{cr,N}$) a calculation as per EOTA TR 055 needs to be carried out. For more details, see ETA-16/0934.
- Concrete is considered non-cracked when the value of tension within the concrete is $\sigma_L + \sigma_R \leq 0$. In the absence of detailed verification $\sigma_R = 3 \text{ N/mm}^2$ can be assumed (σ_L equals the tension within the concrete as a result of external loads, forces on anchor included; σ_R equals the tension coming from shrinkage or creep of the concrete, as well as displacements of supports or temperature variations).
- Shear load figures apply for an anchor without influence of a concrete edge. For shear loads close to an edge ($c \leq 10 \times h_{ef}$), concrete edge failure has to be checked as per EOTA TR 055.

Static and quasi-static loads

The data of these tables is based on:

- ETA-16/0934
- ETA-18/0971 : M6 for multiple use for non-structural applications in concrete.
- Concrete C20/25, $f_{ck,cube} = 25 \text{ N/mm}^2$.
- Installation has been done correctly (page 10).
- No influence of edge distances and spacings.
- Respect of minimum base material thickness (page 11).

	S-KAH+ [kN]	2,4*	2,7	4,1*	8,8*

α_{seis} and α_{gap} included as per EOTA TR 045. The values don't consider any filling of the annular gap between the anchor and the fixture.

* Failure mode = steel

Fire resistance

The data of these tables is based on:

- ETA-16/0934 (M8, M10, M12, M16)
- ETA-18/0971 (M6)
- In the absence of other national regulations the partial safety factor for resistance under fire exposure $\gamma_{M,fi} = 1,0$ is recommended
- Concrete C20/25, $f_{ck,cube} = 25 \text{ N/mm}^2$
- Installation has been done correctly (see page 10).
- No influence of edge distances and spacings.

SETTING INSTRUCTIONS

Installation equipment

Specification	M6	M8	M10	M12	M16	M20
Rotary hammer (recommendation)			750...1200 r.p.m / 1.8...3.3 J			360...550 r.p.m / 4.9...11.5 J
Setting tool (optional)			M6 - M10 SDS+		M12 - M20 SDS+	
Drill bit			SDS+ 2-CUT/4-CUT 8 mm...16 mm			
Additional tools			brush, air pump/compressor, hammer, torque wrench			

INSTALLATION

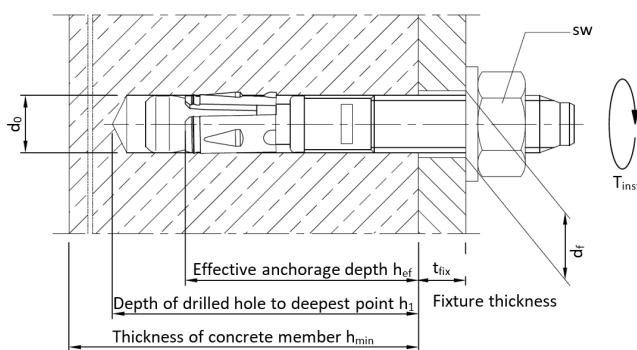

1. Drill a hole according to the product data.
- 2.-3. Clean the hole using a metal brush and a blow-out pump.
4. Install anchor with a hammer or a setting tool.
5. Tighten the anchor to the specified installation torque.

Installation data

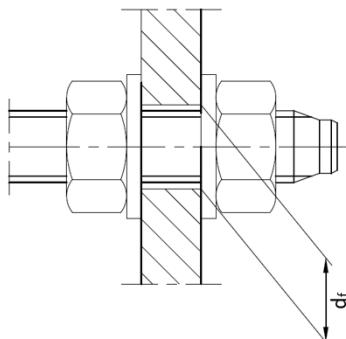

Parameters and anchor sizes		M6	M8	M10	M12	M16	M20
Drill hole diameter	d ₀ [mm]	6	8	10	12	16	20

Setting tool S-KA SDS+

Hammering tool to make through bolt installation quicker and smoother

- Original Sormat through bolts setting tool with designed head that does not damage the head of the anchor and keep the head from slipping.
- Besides ensuring most efficient and safe through bolt installation in general, the setting tool also significantly saves time and energy in serial installation.
- Compatible with all rotary hammer machines with SDS+ chuck.
