European Technical Assessment

ETA 22/0912 of 10/01/2023

English translation prepared by IETcc. Original version in Spanish language

General Part

Technical Assessment Body issuing the ETA designated according to Art. 29 of Regulation (EU) 305/2011:

Trade name of the construction product:

Product family to which the construction product belongs:

Manufacturer:

Manufacturing plant:

This European Technical

Assessment contains:

This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of:

Instituto de Ciencias de la Construcción Eduardo Torroja (IETcc)

EJOT Drop in anchor J+ / JS+ / JSR+ / JE+ / JSE+

Deformation controlled anchor made of galvanized steel or stainless steel of sizes M6, M8, M10, M12, M16 and M20 for use in concrete for redundant non-structural systems

EJOT SE & Co. KG

Market Unit Construction In der Stockwiese 35 57334 Bad Laasphe Germany

15 pages including 3 annexes which form an integral part of this assessment.

European Assessment Document EAD 330747-00-0601, "Fasteners for use in concrete for redundant non-structural systems", ed. May 2018.

Page 2 of European Technical Assessment ETA 22/0912 of 10/01/2023

English translation prepared by IETcc

This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission according to article 25 (3) of Regulation (EU) No 305/2011.

SPECIFIC PART

1. Technical description of the product

The EJOT Drop in anchor J+ / JS+ / JSR+, in the range of M6 to M20, is an anchor made of galvanised steel. The EJOT Drop in anchor JE+ / JSE+, in the range of M6 to M20, is an anchor made of stainless steel. They are placed into a drilled hole and anchored by deformation-controlled expansion. The anchorage is characterised by friction between the sleeve and concrete.

Product and installation descriptions are given in annexes A1 and A2.

2. Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a mean to choosing the right products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance		
Reaction to fire	Anchorages satisfy requirements for		
Neaction to file	class A1 according to EN 13501-1		
Resistance to fire	See annex C7		

3.2 Safety in use (BWR 4)

Essential characteristic						Performance	
Essential	characteristics	under	static	or	quasi	static	See annexes C3 to C6
loading							

4. Assessment and Verification of Constancy of Performances (hereinafter AVCP) system applied, with reference to its legal base

The applicable European legal act for the system of Assessment and Verification of Constancy of Performances (see annex V to Regulation (EU) No 305/2011) is 97/161/EC.

The system to be applied is 2+.

English translation prepared by IETcc

5. Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

The technical details necessary for the implementation of the AVCP system are laid down in the quality plan deposited at Instituto de Ciencias de la Construcción Eduardo Torroja.

Instituto de Ciencias de la Construcción Eduardo Torroja CONSEJO SUPERIOR DE INVESTIGACIONES CIENTÍFICAS

Installed condition in concrete and setting tool	

Installed condition in precast prestressed hollow core concrete slabs

- do: Nominal diameter of drill bit
- d_f: Fixture clearance hole diameter
- d_b: Bottom flange thickness
- a_p : Distance between anchor position and prestressing steel ≥ 50 mm
- I_c: Core distance ≥ 100 mm
- l_p: Presstressing steel distance ≥ 100 mm
- t_{fix}: Fixture thickness
- c: Edge distance

Drop in anchor JSR+	
Product description	Annex A3
Installed condition in precast prestressed hollow core concrete slabs	

Specifications of intended use

Anchorages subjected to:

- Static or quasi static loads for redundant non-structural systems.
- Use for anchorages with requirements related to resistance of fire (not for using in prestressed hollow core slabs).
- The anchor may only be used if in the design and installation specifications for the fixture the excessive slip or failure of one anchor will not result in a significant violation of the requirements on the fixture in the serviceability and ultimate state.

Base materials:

- Reinforced or unreinforced normal weight concrete without fibres according to EN 206-1:2013+A1:2016.
- Strength classes C12/15 to C50/60 acc. to EN 206-1:2013+A1:2016: Drop in anchor J+ / JS+.
- Strength classes C20/25 to C50/60 according to EN 206-1:2013+A1:2016: Drop in anchor JSR+ / JE+ / JSE+.
- Cracked or uncracked concrete.
- Precast, prestressed hollow core concrete slabs, strength C30/37 to C50/60 according to EN 206:2013+A1:2016: Drop in anchor JSR+.

Use conditions (environmental conditions):

- Drop in anchor J+ / JS+ / JSR+: anchorages subjected to dry internal conditions.
- Drop in anchor JE+ / JSE+: anchorages subjected to dry internal conditions, to external
 atmospheric exposure (including industrial and marine environment) or to permanent internal
 damp conditions if no particular aggressive conditions exist. Such particular aggressive
 conditions are e.g. permanent, alternating immersion in seawater or the splash zone of
 seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme
 chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are
 used). Atmospheres under Corrosion Resistance Class CRC III according to EN 1993-14:2006+A1:2015 annex A.

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete.
- Verifiable calculation rules and drawings are prepared taking into account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are designed for design method B in accordance with EN 1992-4:2018
- Anchorages under fire exposure are designed in accordance to EN 1992-4:2018. It must be ensured that local spalling of the concrete cover does not occur.

Installation:

- Hole drilling by rotary plus hammer mode.
- Anchor installation carried out by appropriately qualified personal and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of aborted hole or smaller distance if the aborted hole is filled with high strength mortar and if under shear or oblique tension load it is not the direction of the load application.
- Drop in anchor J+ / JS+ / JSR+: the bolt or threaded rod to be used shall be property class 4.6, 5.6, 5.8, 6.8 or 8.8 according to ISO 898-1.
- Drop in anchor JE+/ JSE+: the bolt or threaded rod to be used shall be property class A4-50, A4-70 or A4-80 according to EN 3506-1:2009
- The length of the bolt shall be determined as: -Minimum bolt length = t_{fix} + $\ell_{s,min}$ -Maximum bolt length = t_{fix} + $\ell_{s,max}$

Drop in anchor J+ / JS+ / JSR+ / JE+ / JSE+
